

# VPF Futures

## 2-Week Quality Improvement Plan

Start Date: March 24, 2026

Team: 8 Admins . 14 Traders . 70 Clients . QA Team

Goal: 100% data accuracy and zero client complaints caused by internal errors

### WHY THIS MATTERS -- Evidence From the Field

| #  | Issue Observed                                     | Impact                                             |
|----|----------------------------------------------------|----------------------------------------------------|
| 1  | Hedge Net not calculating after status changes     | Clients see stale/empty financial data -- trust er |
| 2  | 28-hour Discord response time during admin trans   | Client publicly questioning our reliability in gro |
| 3  | Client cross-referencing with other clients about  | Trust deficit -- client doesn't believe their own  |
| 4  | Evaluation row deleted without explanation (Row :  | Client says it "smells fishy" -- data integrity co |
| 5  | Dashboard data not updated for an entire day (Mo   | Client catches it before we do -- reactive instead |
| 6  | Traders missing trades / running out of time       | Downtime = lost profit days for the client         |
| 7  | Wrong values entered in manual fields              | Compounding errors, false Hedge Net results, bad E |
| 8  | Notes stale or missing on active accounts          | Clients don't know what's happening with their mon |
| 9  | Hedge Day columns showing previous day's mark      | Proof of missed trades -- no one catching it syste |
| 10 | Clients have no way to independently verify calcul | Zero transparency -- must blindly trust the team   |

### THE 4-LAYER QUALITY SYSTEM

Every client's data passes through minimum 3 independent checks -- nothing can slip through.

#### CLIENT DATA

```
|---- LAYER 1: SYSTEM (Automated)      -> Catches 70% -- runs on ALL 70 clients daily
|---- LAYER 2: PROCESS (Checklists)    -> Catches 20% -- human confirms completeness
|---- LAYER 3: HUMAN QA (Spot-checks)  -> Catches 10% -- verifies accuracy & quality
\---- LAYER 4: ACCOUNTABILITY (Tracking) -> Makes it all stick -- scorecards & escalation
```

### WEEK 1 -- DETECT & SURFACE (March 24-28)

#### Day 1-2 (Mon-Tue): Automated Daily Quality Scan

**What: Build a backend scan that checks every client nightly and flags SOP violations.**

| Check                                      | SOP Reference | What It Catches                                   |
|--------------------------------------------|---------------|---------------------------------------------------|
| Missing Date Started                       | Trader \$6b   | First trade placed but no start date              |
| Missing Date Ended                         | Trader \$7    | Account marked Fail/Complete but no end date      |
| Empty Fee / Account Size                   | Trader \$9    | Manual entry fields left blank                    |
| Empty Activation Fee on funded accounts    | Trader \$9    | Funded row missing activation fee                 |
| Active account with no note                | Trader \$8    | Any eval not Fail/Complete without a current note |
| Note older than 24 hours on active account | Trader \$8    | Stale note -- trader hasn't reviewed              |

| Check                                       | SOP Reference   | What It Catches                                       |
|---------------------------------------------|-----------------|-------------------------------------------------------|
| Negative Hedge Net without explanatory note | Trader §7d      | Loss not explained -- SOP requires why + prevention   |
| Status = Payout but no payout tracking note | Trader §4e      | Payout marked but no timestamped follow-up            |
| Farming note wrong format                   | Trader §4d      | Missing "X/Y - date" pattern (e.g., "3/5 - 3/15/26")  |
| No MT5 push in 24h on weekday               | Trader §5       | Missed trades -- no data pushed for active hedging    |
| Status blank on non-empty row               | Trader §6b      | Row has data but no status set                        |
| Hedge Day column shows stale day marker     | Trader workflow | e.g., "Wed" still present on Thursday = missed trades |
| Account # blank on active row               | Trader §4g      | Account number not filled in                          |

**Output: Per-trader report posted to their Slack QA channel every morning.**

**Technical Build:**

- ☐ Backend: `/api/quality/scan` endpoint -- scans all clients, returns per-trader issues
- ☐ Backend: `/api/quality/report` endpoint -- returns latest scan results for dashboard
- ☐ Cron/scheduled task: Run scan daily at 2:00 AM EAT

**Day 3-4 (Wed-Thu): Super Admin Quality Dashboard Tab**

**What: New "Data Quality" tab on the super admin page.**

**Features:**

- Health score per client: ? 100% | ? 80-99% | ? <80%
- Breakdown by trader -- each admin sees their 2 traders at a glance
- Drill-down: click any flag to jump directly to that client's eval row
- Filters: "Show all missing dates" / "Show all stale notes" / "Show missed trades"
- Summary cards: Total issues today, issues by category, trend vs. yesterday

**Technical Build:**

- ☐ Frontend: New tab on super admin page with quality metrics
- ☐ Frontend: Per-trader expandable sections showing client health
- ☐ Frontend: Click-to-navigate from any issue to the specific client/row
- ☐ Backend: Aggregate quality data by trader, by admin, by issue type

**Day 5 (Fri): Quick Wins -- Security + Visibility**

**5a. Restrict Delete to Super Admin Only**

Currently any admin/trader can delete evaluation rows. This caused the "Row 397 missing" incident.

- ☐ Backend: Change delete endpoint to require `super\_admin` session
- ☐ Frontend: Hide delete button for non-super-admin users
- ☐ Backend: Log all deletions with who deleted, what was deleted, and when

**5b. "Last Activity" Indicators on Client Dashboard**

- ☐ Show "Last MT5 Push: 6h ago" on each client's dashboard header
- ☐ Show "Last Edit: 2d ago by Steve" -- identifies abandoned clients
- ☐ Warning badge if >24h since last push on a weekday

**5c. CSV Download Button**

Allow clients (and all users) to download their full evaluation data as CSV for independent verification.

- ☐ Backend: `/api/client/{id}/export\_csv` endpoint
- ☐ CSV includes ALL fields: Prop Firm, Account Size, Date Purchased, Fee, Date Started, Date Ended, Status P1, Account #, all Hedge Results (1-5, 1.1-5.1, 6, 7), Hedge Net, Hedge Net.1, Account #.1, Activation Fee, Status, all Payouts + Dates, all Hedge Days 1-50, Farming Profit, Notes
- ☐ Frontend: Download button on client dashboard (visible to all user types)
- ☐ Include calculated stats in a second sheet/section (EV, net profit, etc.)

## WEEK 2 -- PREVENT & ENFORCE (March 31 - April 4)

### Day 6-7 (Mon-Tue): Save-Time Validation Warnings

**What: When a trader/admin hits Save, the system highlights all data quality issues.**

**Behavior:**

- Warning banner: "?? 3 issues found -- Date Started missing on row 2, Fee empty on row 5, No note on row 3"
- Highlight specific cells in red
- \*\*Do NOT block the save\*\* -- the data might not be available yet
- Log every dismissed warning with timestamp and user -- becomes QA audit trail
- Special warning if Hedge Net is negative and no note exists (Trader \$7d)

**Technical Build:**

- ☐ Frontend: Validation function that checks all required fields before save
- ☐ Frontend: Visual highlighting of problem cells
- ☐ Backend: Log dismissed warnings per save for QA audit

### Day 8-9 (Wed-Thu): Trader & Admin Daily Checklists

**What: Built-in checklists in the dashboard that must be submitted daily. Logged with timestamp for QA audit.**

**Trader Daily Sign-Off Checklist:**

| # | Checkpoint                                                           | Why It Can't Be Automated                    |
|---|----------------------------------------------------------------------|----------------------------------------------|
| 1 | "I confirmed all accounts are visible on Tradovate"                  | Requires visual cross-check across platforms |
| 2 | "I verified MT5 name matches client name on every platform"          | Identity verification                        |
| 3 | "I confirmed Tradovate balance matches the sheet"                    | Cross-platform number comparison             |
| 4 | "I checked forexfactory.com for red-zone news before trading"        | External source review                       |
| 5 | "I verified trades against the correct blueprint before execution"   | Judgment call requiring context              |
| 6 | "I confirmed MT5 opposite trade executed after entry"                | Real-time hedging verification               |
| 7 | "Every active account has an updated note with today's trading plan" | Quality of note content                      |
| 8 | "I traded ALL accounts -- none were skipped"                         | Completeness confirmation                    |
| 9 | "All numbers entered are exact to the cent, no rounding"             | Accuracy intent                              |

**Admin Daily Sign-Off Checklist:**

| # | Checkpoint                                         |
|---|----------------------------------------------------|
| 1 | "All challenges needed for tomorrow are purchased" |
| 2 | "All failed account subscriptions are cancelled"   |
| 3 | "All master agreements are signed"                 |
| 4 | "All eligible payouts are requested"               |
| 5 | "All client emails checked for notifications"      |
| 6 | "All Discord messages replied to"                  |
| 7 | "Daily summary sent to EVERY client"               |
| 8 | "All clients are within challenge limit"           |

### System Cross-Check:

If a trader checks "I traded ALL accounts" but the system detected 2 accounts with no MT5 push -> automatic flag for QA.

### Technical Build:

- ☐ Backend: Checklist submission + storage endpoints
- ☐ Backend: Cross-reference checklist claims vs. automated scan findings
- ☐ Frontend: Checklist UI accessible from dashboard (trader/admin views)
- ☐ Frontend: QA view showing all checklist submissions + discrepancies

## Day 10 (Fri): Weekly Scorecard + Auto-Generated Summary Draft

### 10a. Weekly Trader Scorecard (posted every Monday to #admins-traders):

| Metric                                 | How It's Calculated                   |
|----------------------------------------|---------------------------------------|
| % of clients with 100% complete data   | From automated quality scan           |
| Missed trade days this week            | Stale Hedge Day markers + no MT5 push |
| Stale notes (>24h on active accounts)  | From quality scan                     |
| QA flags raised this week              | Logged from scan + spot-checks        |
| Checklists submitted every trading day | From checklist log                    |
| **Overall Quality Score**              | Weighted average of above             |

### 10b. Auto-Generated Daily Summary Draft:

Auto-generate 80-90% of the Admin Daily Summary (Admin SOP §4) from dashboard data:

| Summary Section                 | Data Source                             | Auto or Manual              |
|---------------------------------|-----------------------------------------|-----------------------------|
| 1. Challenge Purchase Status    | Count evals by firm vs. expected limits | Semi-auto (admin confirms)  |
| 2. Renewal / Cancellation Check | Evals recently marked "Fail"            | Auto-generated              |
| 3. Trading / Operational Delays | N/A                                     | Manual (admin adds context) |
| 4. Payout Requests              | Evals with Status = "Payout" + dates    | Auto-generated              |
| 5. Payout Confirmation          | Evals with payouts recently confirmed   | Auto-generated              |
| 6. Client Action Items          | Derived from above                      | Semi-auto                   |

Admin reviews, tweaks, and posts to Discord. Saves 15-20 minutes per client per day.

### 10c. CSV Re-Import via Companion App

Allow bulk data correction by importing a CSV back through the connector app.

☐

Companion app: File picker for CSV upload

- ☐ Backend: `/api/client/import\_csv` endpoint -- parses CSV and merges into evaluations
  - ☐ Validation: Check column headers match expected fields, flag any mismatches
  - ☐ Merge logic: Match rows by Account # -> update existing, add new
  - ☐ Available to anyone connected to the client account via the companion app
- 

## ONGOING -- QA TEAM MANUAL PROCEDURES

---

These cannot be automated and require consistent human execution:

### Daily QA Routine

#### Morning (after automated scan runs at 2AM EAT):

- 1. Review the automated quality report in the Data Quality dashboard tab
- 2. Prioritize red flags -- assign to trader's Slack channel
- 3. Spot-check \*\*3 random clients per trader\*\* (rotate daily -- different clients each day):
  - Open client dashboard
  - Verify notes are current AND meaningful (not generic filler)
  - Verify hedge results look reasonable (not copy-paste errors)
  - Cross-check that status progression makes sense
- 4. Review each trader's daily sign-off checklist -- flag discrepancies

#### Evening (after market close):

- 1. Confirm every trader submitted their daily checklist
- 2. Confirm every admin submitted their daily checklist
- 3. Any trader who didn't submit -> immediate Slack escalation to their admin
- 4. Review the "missed trades" list -- confirm explanations are valid

### Weekly Deep Audit (Friday/Weekend)

- 1. Pick \*\*2 clients per trader\*\* for full row-by-row review:
  - Every eval row: dates present, statuses correct, notes current
  - Every hedge result: does the value look reasonable?
  - Every payout: amount exact to the cent, note with confirmation date
- 2. Admin weekly review:
  - Were all 7 daily summaries sent this week (Mon-Sun)?
  - Were all client action items followed up on?
  - Was any client left waiting >24h without a response?
- 3. Compare trader quality scores week-over-week -- identify trends

### Client Handoff Protocol (When Trader/Admin Changes)

When a client is reassigned to a new trader or admin:

- 1. Outgoing person creates handoff note in Slack with:
  - Current status of every active account

- Any pending issues or follow-ups
- Client communication style preferences
- 2. New person reviews ALL client notes within 24 hours
- 3. New person posts introduction in client's Discord channel within 24 hours
- 4. QA spot-checks the client daily for the first week after transition

---

## ESCALATION CHAIN

```
Issue detected by automated scan or QA
|
v
Trader's Slack QA channel (callout posted)
| (not fixed within 4 hours)
v
Admin notified in #admins-traders
| (not fixed within 24 hours)
v
Harry / Philip notified directly
```

For client-facing issues (missed Discord messages, delayed payouts):

```
Client messages in Discord
| (no response within 4 hours)
v
QA flags in admin's Slack channel
| (still no response within 8 hours)
v
Harry / Philip notified + reassignment considered
```

---

## IMPLEMENTATION CHECKLIST

### Week 1 Deliverables

- ☐ Automated daily quality scan (backend + scheduled job)
- ☐ Quality scan Slack notifications (per-trader channels)
- ☐ Super admin Data Quality dashboard tab
- ☐ Restrict evaluation delete to super\_admin only
- ☐ "Last Activity" indicators on client dashboards
- ☐ CSV Download button for clients

### Week 2 Deliverables

- ☐ Save-time validation warnings (frontend)
- ☐ Trader daily checklist (UI + logging)
- ☐ Admin daily checklist (UI + logging)
- ☐ Cross-check: checklist claims vs. automated findings
- ☐ Weekly trader scorecard generator
- ☐ Auto-generated daily summary draft for admins
- ☐ CSV Re-import via companion app

**Process Deliverables (No Code -- QA Team)**

- ☐ QA daily routine documented and assigned
- ☐ QA weekly deep audit schedule created (rotating client assignments)
- ☐ Client handoff protocol implemented
- ☐ Escalation chain communicated to all admins and traders
- ☐ Weekly team meeting established to review scorecards

**SUCCESS METRICS (After 2 Weeks)**

| Metric                                          | Current (Estimated) | Target |
|-------------------------------------------------|---------------------|--------|
| Clients with 100% complete eval data            | ~60%                | 95%+   |
| Average missed trade days per trader per week   | 2-3                 | 0      |
| Notes updated within 24h on all active accounts | ~70%                | 100%   |
| Daily summaries sent to every client every day  | ~80%                | 100%   |
| Client complaints about data accuracy           | Weekly              | Zero   |
| Average Discord response time                   | 12-28h              | <4h    |
| Trader daily checklists submitted               | N/A (new)           | 100%   |

*Document Version: 1.0 -- March 19, 2026*

*Next Review: April 7, 2026 (end of 2-week sprint)*
