

VPF FUTURES

2-Week Quality Improvement Plan

TEAM

8 Admins

TEAM

14 Traders

CLIENTS

70 Active

GOAL

100% data accuracy and zero client complaints
caused by internal errors

WEEK 1: Detect & Surface

Mar 19 - Mar 25, 2026

WEEK 2: Prevent & Enforce

Mar 26 - Apr 1, 2026

Confidential -- Internal Document

Document Version 1.0 -- March 19, 2026

Prepared by VPF Operations Team

WHY THIS MATTERS -- Evidence From the Field

The following issues have been documented from real client complaints and internal observations. Each one represents a service failure the quality system must eliminate.

#	Issue Observed	Client Impact	Status
1	Hedge Net not calculating after status changes	Stale/empty financial data	FIXED
2	28-hour Discord response time	Client publicly questioning reliability	OPEN
3	Client cross-referencing with others	Trust deficit in the team	OPEN
4	Eval row deleted without explanation	Client says it "smells fishy"	OPEN
5	Dashboard not updated for entire day	Client catches it before us	OPEN
6	Traders missing trades / out of time	Downtime = lost profit days	OPEN
7	Wrong values in manual entry fields	False calculations, bad EV	OPEN
8	Notes stale/missing on active accounts	Clients don't know status	OPEN
9	Hedge Day shows previous day marker	Proof of missed trades	OPEN
10	No way for clients to verify data	Zero transparency	OPEN

THE 4-LAYER QUALITY SYSTEM

Every client's data passes through minimum 3 independent checks. Nothing can slip through without someone being held accountable.

1	SYSTEM (Automated) Runs on ALL 70 clients daily -- catches missing fields, stale data, missed pushes	70%
2	PROCESS (Checklists) Trader & admin daily sign-off -- human confirms completeness	20%
3	HUMAN QA (Spot-Checks) Random client reviews -- verifies accuracy & note quality	10%
4	ACCOUNTABILITY (Tracking) Weekly scorecards, escalation chain -- makes everything stick	

The Guarantee: No client can be forgotten because:

- The automated scan checks ALL 70 clients every single day
- The checklist forces traders to confirm EVERY client before sign-off
- QA rotates through random clients so every one gets spot-checked within 2 weeks

WEEK 1 -- DETECT & SURFACE (Mar 19-25)

Day 1-2 (Wed-Thu Mar 19-20): Automated Daily Quality Scan

Backend scan checks every client nightly and flags all SOP violations. Per-trader report posted to their Slack QA channel every morning.

Quality Check	SOP Ref	What It Catches
Missing Date Started	Trader S6b	First trade placed but no start date
Missing Date Ended	Trader S7	Fail/Complete but no end date
Empty Fee / Account Size	Trader S9	Manual entry fields left blank
Empty Activation Fee (funded)	Trader S9	Funded row missing activation fee
Active account, no note	Trader S8	Not Fail/Complete without current note
Note older than 24 hours	Trader S8	Stale note, trader hasn't reviewed
Negative Hedge Net, no note	Trader S7d	Loss not explained per SOP
Payout status, no tracking note	Trader S4e	No timestamped payout follow-up
Farming note wrong format	Trader S4d	Missing "X/Y - date" pattern
No MT5 push in 24h (weekday)	Trader S5	Missed trades -- active client
Status blank on non-empty row	Trader S6b	Row has data but no status
Stale Hedge Day marker	Workflow	"Wed" still present on Thursday
Account # blank on active row	Trader S4g	Account number not filled in

Day 3-4 (Fri-Sat Mar 21-22): Quality Dashboard Tab

New "Data Quality" tab on the super admin page providing full visibility:

- Health score per client: GREEN (100%) | YELLOW (80-99%) | RED (<80%)
- Breakdown by trader -- each admin sees their 2 traders at a glance
- Click any flag to jump directly to the client's eval row
- Filters: "Show missing dates" / "Show stale notes" / "Show missed trades"
- Summary cards: Total issues today, issues by category, trend vs yesterday

Day 5 (Sun Mar 23): Quick Wins -- Security + Visibility

5a. Restrict Delete to Super Admin Only

Only super admins can delete evaluation rows. Prevents the "Row 397 missing" incident. All deletions logged with who, what, and when.

5b. "Last Activity" Indicators

- "Last MT5 Push: 6h ago" on each client's dashboard header
- "Last Edit: 2d ago by Steve" -- identifies abandoned clients
- Warning badge if >24h since last push on a weekday

5c. CSV Download Button

Clients and all users can download full evaluation data as CSV to independently verify all calculations.

- ALL fields: Prop Firm, Account Size, Dates, Fees, Statuses, Hedge Results, Payouts, Days, Notes
- Includes calculated statistics (EV, net profit, etc.)

Day 6-7 (Mon-Tue Mar 24-25): Save-Time Validation

When a trader/admin saves, the system highlights all data quality issues before data is committed:

- Warning banner: "3 issues: Date Started missing on row 2, Fee empty on row 5"
- Problem cells highlighted in red
- Does NOT block save -- data might not be available yet
- Every dismissed warning logged with timestamp + user for QA audit
- Special warning if Hedge Net is negative and no note exists

WEEK 2 -- PREVENT & ENFORCE (Mar 26 - Apr 1)

Day 8-9 (Wed-Thu Mar 26-27): Daily Checklists

Built-in checklists in the dashboard. Logged with timestamp. System cross-checks claims against automated findings.

Trader Daily Sign-Off Checklist:

#	Checkpoint	Why It's Manual
1	All accounts visible on Tradovate AND dashboard	Cross-platform visual check
2	MT5 name matches client name on hedging accts	Identity verification
3	Tradovate balance matches sheet (within \$100)	Cross-platform comparison
4	Checked forexfactory.com for red-zone news	External source review
5	Verified trades against correct blueprint	Judgment call
6	Confirmed MT5 opposite trade executed	Real-time hedge verification
7	Every active account has updated note	Content quality check
8	Traded ALL accounts -- none skipped	Completeness confirmation
9	All numbers exact to the cent, no rounding	Accuracy intent

Admin Daily Sign-Off Checklist:

#	Checkpoint
1	All challenges needed for tomorrow are purchased
2	All failed account subscriptions are cancelled
3	All master agreements are signed
4	All eligible payouts are requested
5	All client emails checked for notifications
6	All Discord messages replied to
7	Daily summary sent to EVERY client
8	All clients are within challenge limit

CROSS-CHECK RULE

If a trader checks "I traded ALL accounts" but the system detected no MT5 push -> automatic QA flag.

Day 10 (Fri Mar 28): Weekly Scorecard

Per-trader metrics posted every Monday to #admins-traders:

Metric	Data Source
% clients with 100% complete data	Automated quality scan
Missed trade days this week	Stale Hedge Day markers + no MT5 push
Stale notes (>24h on active accounts)	Quality scan results
QA flags raised this week	Scan + spot-checks combined
Checklists submitted every trading day	Checklist submission log
Overall Quality Score	Weighted average of all above

Day 11 (Sat Mar 29): Auto-Generated Daily Summary

Auto-generate 80-90% of the Admin Daily Summary from dashboard data. Admin reviews, tweaks, and posts to Discord. Saves 15-20 min per client per day.

Summary Section	Data Source	Type
1. Challenge Purchase Status	Eval count by firm vs limits	Semi-auto
2. Renewal / Cancellation	Recently-failed accounts	Auto
3. Trading / Operational Delays	N/A	Manual
4. Payout Requests	Evals with Status = Payout	Auto
5. Payout Confirmation	Recently confirmed payouts	Auto
6. Client Action Items	Derived from above sections	Semi-auto

Day 12-14 (Sun-Tue Mar 30 - Apr 1): CSV Re-Import + Polish

Allow bulk data correction by importing CSV back through the companion app:

- File picker for CSV upload in the companion app
- Validation: Check column headers match expected fields, flag mismatches
- Merge logic: Match rows by Account # -> update existing or add new
- Available to anyone connected to the client via the companion app

QA TEAM -- MANUAL PROCEDURES

These procedures cannot be automated and require consistent daily execution by the QA team.

Daily QA Routine

Morning (after automated scan at 2AM EAT):

- Review automated quality report in Data Quality dashboard tab
- Prioritize red flags -- assign to trader's Slack channel
- Spot-check 3 random clients per trader (rotate daily)
- Verify notes are current AND meaningful (not generic filler)
- Verify hedge results look reasonable (not copy-paste errors)
- Cross-check that status progression makes sense
- Review each trader's daily sign-off checklist -- flag discrepancies

Evening (after market close):

- Confirm every trader submitted their daily checklist
- Confirm every admin submitted their daily checklist
- Non-submission -> immediate Slack escalation to their admin
- Review "missed trades" list -- confirm explanations are valid

Weekly Deep Audit (Friday/Weekend):

- Pick 2 clients per trader for full row-by-row review
- Every eval row: dates present, statuses correct, notes current
- Every hedge result: value looks reasonable
- Every payout: amount exact to the cent, note with confirmation
- Admin review: All 7 daily summaries sent? All action items followed up?
- Compare trader quality scores week-over-week -- identify trends

Client Handoff Protocol

When a client is reassigned to a new trader or admin:

- Outgoing person creates handoff note with status of every active account
- New person reviews ALL client notes within 24 hours
- New person posts introduction in client's Discord within 24 hours
- QA spot-checks the client daily for the first week after transition

ESCALATION CHAIN

Internal Data Issues:

```
Issue detected by automated scan or QA
|
v
Trader's Slack QA channel (callout posted)
| (not fixed within 4 hours)
v
Admin notified in #admins-traders
| (not fixed within 24 hours)
v
Harry / Philip notified directly
```

Client-Facing Issues:

```
Client messages in Discord
| (no response within 4 hours)
v
QA flags in admin's Slack channel
| (still no response within 8 hours)
v
Harry / Philip notified + reassignment considered
```

IMPLEMENTATION CHECKLIST

Week 1 Deliverables (Mar 19-25)

- ☐ Automated daily quality scan (backend + scheduled job)
- ☐ Quality scan Slack notifications (per-trader channels)
- ☐ Super admin Data Quality dashboard tab
- ☐ Restrict evaluation delete to super_admin only
- ☐ "Last Activity" indicators on client dashboards
- ☐ CSV Download button for clients
- ☐ Save-time validation warnings (frontend)

Week 2 Deliverables (Mar 26 - Apr 1)

- ☐ Trader daily checklist (UI + logging)
- ☐ Admin daily checklist (UI + logging)
- ☐ Cross-check: checklist claims vs. automated findings
- ☐ Weekly trader scorecard generator
- ☐ Auto-generated daily summary draft for admins
- ☐ CSV Re-import via companion app

Process Deliverables (QA Team -- No Code)

- ☐ QA daily routine documented and assigned
- ☐ QA weekly deep audit schedule created (rotating clients)
- ☐ Client handoff protocol implemented
- ☐ Escalation chain communicated to all admins and traders
- ☐ Weekly team meeting established to review scorecards

SUCCESS METRICS (After 2 Weeks)

These are the measurable targets that define whether the quality sprint was successful:

Metric	Current (Est.)	Target
Clients with 100% complete eval data	~60%	95%+
Avg missed trade days / trader / week	2-3	0
Notes updated <24h on active accounts	~70%	100%
Daily summaries sent every day	~80%	100%
Client complaints about data accuracy	Weekly	Zero
Average Discord response time	12-28h	<4h
Trader daily checklists submitted	N/A (new)	100%

Document Version 1.0 -- March 19, 2026

Sprint Duration: March 19 - April 1, 2026

Next Review: April 2, 2026 (end of 2-week sprint)
